One Stop Solution for Distance Learning

March 2020

Team

Egzontina Krasniqi - Software Engineer

Rahul Raj - Software Engineer

Senad Sali - Software Engineer

Problem

Schools are now closed, with regular lessons being replaced by e-learning. In most conventional forms, teachers send assignments to children by e-mail. Children are often unable to complete these assignments. They don't know how to solve a math problem on their own or maybe they don't understand instructions in English or any other language. Also, they would rather just play Minecraft. Parents are often unable to help their children. They are parents, not teachers. They may not know English, they were in school 30 years ago when subjects were taught differently. Additionally, after the whole day at work, they are tired and worried. The uncertainty of the present situation is not helping. Grandparents are not able to help either. Because even though they bravely look after children when parents try to work, they don't know how to add a file to Padlet or log in to Zoom. Most importantly, even teachers often fail in this situation. The traditional chalkboard has been replaced with a variety of unfamiliar platforms, applications and websites. Not all teachers are capable of becoming modern communication technology experts overnight.

Solution: Distance Learning

The project aims at developing a network of educational, digital support for children from primary schools.

- It operates on the basis of creating school tandems: a highschool willing to help gets paired with a primary school, whose students could profit from the cooperation.
- The students and graduates of the high school involved in the project take on the role of tutors for primary school children. The tutors can provide help.

How Distance Learning?

For children:

By helping them catch up with schoolwork.

By providing conversations in different foreign languages.

By providing fascinating tutorials on a variety of extracurricular subjects (e.g. graphics, engineering, film)

For teachers

By aiding in the selection of the most effective methods of coordinating e-learning.

By providing IT consultations and the understanding of the field of online communication.

For Admin or Rector Access of all Details

How Distance Learning?

For children:

By helping them catch up with schoolwork.

By providing conversations in different foreign languages.

Distance Learning: Who and how?

- Sell for free to local schools and then go to government with 1000 schools
 - Primary schools
 - High Schools
- Default version and advanced(pro) versions
- System customized according to school requirements
- Super User Experience

Conclusion

Even after the Corona crisis, there should be a way to enable all children to unfold their potential digitally and to create equal chances to succeed in a digital world
